

OVERTURNABLE PHONE

Abstract of Disclosure

A communicative device (cellular phone) with the ability to use in normal and upside down positions to make using of device more convenient. The technical result consists in indifference of which edge of phone is to be held upwards, is achieved by installation (on the tube) of two sets of microphone + speaker microphone of one set nearby the speaker of other set and vice versa – and a special switch for connecting the necessary set manually or automatically by a special gravity sensible switch.
